SHOPFLOOR MATTERS

What makes a factory smart?

Five things, and only one is mainly about technology

Matt Barber · shopfloormatters.com

01

Defined processes, rather than “ask Dave, he knows how it works”.

02

Planning connected to execution. When a machine goes down, the planner knows.

03

Real-time data at the point of work. The operator shouldn’t have to go looking.

04

One source of truth. The morning meeting starts with the facts.

05

People backed to make the call, instead of firefighting.

Only one of the five is mainly about technology

None of them works without the people and the processes.

YOUR TURN

Which of the five does your factory struggle with most?
