SHOPFLOOR MATTERS

We’re doing AI on the shopfloor

The first question: which kind?

Matt Barber · shopfloormatters.com

Swipe →

Machine learning

Predicts outcomes from your own data: failures, quality, anomalies and defects.

Generative AI

Arrives already trained. Helps people with plain-English answers and shift summaries.

Agentic AI

Plans and carries out tasks through other software, with a person approving.

What ML needs

Your own history, captured automatically and with context. Built up alongside the model.

What GenAI needs

The documents and know-how you already have. It can start now.

YOUR TURN

When your business says ”we’re doing AI”, which kind?
