SHOPFLOOR MATTERS

AI, ML and GenAI are not the same thing

What each one actually does on the shopfloor

Matt Barber · shopfloormatters.com

Swipe →

Machine learning

Predicts outcomes from your data: maintenance, quality, anomalies and defects.

Generative AI

Creates text and answers. Helps people, doesn't control machines.

Agentic AI

Plans and carries out tasks through other software. The top of the maturity curve.

What they all need

Good, granular, contextualised data, collected over time.

AI is the last step, not the first.
