What is a smart factory?

A practical definition, without the version numbers

Matt Barber · shopfloormatters.com

Swipe →

People, processes and technology working together, supported by data.

The old way relied on stability

Fewer products, predictable demand, reliable supply and people who stayed for decades.

That stability has gone

More variety, higher costs, full traceability and experienced people retiring.

The complexity is what it is

A smart factory increases your capacity to handle it.

Where MES/MOM fits

It runs the processes, connects planning to the floor and creates one source of truth.
