Line 3 stops at 02:14

When does the right person find out, and do they know why?

STAGE

1 Eventually

A downtime sheet goes in a tray, and gets typed up if it's lucky.

STAGE

2 End of hour or shift

ERP knows how many were good, but not why the line stopped.

STAGE

3 After the fact

Keyed into a tablet once the stop is over, rounded and late.

STAGE

4 Right now

Logged at 02:14 from the machine, with the order already attached.

STAGE

5 Before it happens

The temperature trend raises a warning at 23:40.

STAGE

6 Before anyone asks

An agent books the repair, and a supervisor approves it.

STAGE

7 Without asking

Routine decisions made inside limits the business agreed.

AI adds value at every stage

And the value climbs much faster once the truth arrives right now.

YOUR TURN

Where would your factory find out?
