What is a smart factory?

No version number required.

People, processes and technology, working together on good data.

That's the whole definition.

01

Defined processes. Not ”ask Dave, he knows how it works”.

02

Planning connected to execution. When a machine stops, the planner knows.

03

Real-time data at the point of work. The operator shouldn’t go looking.

04

One source of truth. The morning meeting starts with facts.

05

People backed to make the call. Less firefighting, more improving.

Only one of the five is really about technology

That's deliberate.
